

# PACER STACKTRAIN

NEWS ALERT

**September 11, 2000**  
Electronic Bulletin No. 101

## **EMPTY CAPACITY PROGRAM FOR SOUTHERN CALIFORNIA**

Pacer Stacktrain is, again, expecting a strong demand for domestic containers in Southern California to meet this year's peak season shipping requirements. Due to this strong demand we will once again offer an Empty Program in an effort to meet as many of the capacity needs during this period as we possibly can. To improve this program and make it more user friendly, Pacer will no longer require IMC's to arrange the movement of these empty containers as we have in the past. Pacer Stacktrain will move available empty equipment from any surplus locations as long as the demand under this program supports it and make these boxes available at Becker Yard or at Container Care inspected and in good order. IMC's will no longer need to deal with the issues of timing the transit to their needs, rail storage issues, or equipment in bad order status. There is no guarantee or volume commitment, as the program will be driven based on available surplus capacity. We will proactively reposition surplus equipment to Becker Yard and Container Care, where we will then make the container available on the following day. Pacer Stacktrain will require a fax authorization to bill the mty's as requested.

Pacer Stacktrain will offer this available capacity to the IMC at a cost of \$425 per container regardless of size. Pacer Stacktrain will require a fax authorization to bill available containers that are requested, fax requests should be sent to 714-429-7097. Billing of this equipment will be done weekly and will be based upon boxes actually pulled out of Becker Yard or Container Care against the container release number provided by our dispatch group from the fax authorization described above.

Pacer Stacktrain anticipates that this program will commence within the next two weeks and will provide a one-day advance notice of the effective date of this program

If you would like additional information on this program to support your equipment need please contact:
